

SPECIMEN REPORTING SYSTEM**ABSTRACT OF THE DISCLOSURE**

A method, system and computer program product for transportably managing specimen data among specimen collection facilities. In accordance with one embodiment, a management center receives a report from a client terminal. The report includes a sensor-based specimen description and is processed in accordance with a facility identifier corresponding to the specimen collection facility at which the client terminal is located. The facility identity specific processing includes storing the specimen description in association with the facility identifier in a network accessible data storage device. In a further aspect, the specimen report is processed in accordance with a priority level indicator, such that in one embodiment in which the priority level indicator is included with the specimen report, an audio alert signal is triggered in accordance with the level of urgency represented by the priority level indicator.
